                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480
complex suggests that it may contribute to prevent expression of genes that trigger the cell into mitcsis (By similarity).

-! SUBURIT: Part of the E2F6.com-1 complex in G0 phase composed of E2F6, MGA, MAX, TFDP1, EAR3, BAT8, EUHMTASE1, RING1, RNF2, MBLR, BAT8 and YAP2 (By similarity).

-! SUBCEDILIVAR LOCATION: Nuclear (Probable).

-! SIMILARITY: Contains 1 C4-type zinc finger.

-! SIMILARITY: Contains 4 MBT domains.

"A complex with chromatin modifiers that occupies B2F- and
Myc-responsive genes in G0 cells.";
Science 296:1132-1136(2002)
-!- FUNCTION: Putative Polycomb group (PcG) protein. PcG proteins
maintain the transcriptionally repressive state of genes, probably
via a modification of chromatin, rendering it heritably changed in
its expressibility. Its association with a chromatin remodeling

"A complex with chromatin modifiers that occupies E2F- and

Myc-responsive genes in G0 cells.",

Science 296:1132-1136(2002)

-I- FUNCTION: Putative Polycomb group (PcG) protein. PcG proteins

maintain the transcriptionally repressive state of genes, probably

via a modification of chromatin, rendering it heritably changed in

its expressibility. Its association with a chromatin remodeling

Its association with a chromatin remodeling complex suggests that it may contribute to prevent expression of genes that trigger the cell into mitosis (By shinlarity).

SUBUNIT: Part of the 2F6.com-1 complex in GO phase composed of E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR, SUBCELLUIAR LOCATION: Ordear (Probable).

SUBCELLUIAR LOCATION: Nuclear (Probable).

SIMILARITY: Contains 1 C4-type zinc finger. Gaps MGD; MGI:2443584; 4732493NG6Rik.
SMART; SM00561; MBT; 4.
Transcription regulation; Chromatin regulator; Nuclear protein;
Zinc-finger; Metal-binding; Repeat.

FUNCTION: Polymerase that creates the 3' poly(A) tail of mRNA's.

Also required for the endoribonucleolytic cleavage reaction at some polyadenylylation sites. May acquire specificity through interaction with a cleavage and polyadenylation specificity factor (CPSF) at its C-terminas.

CATALYTIC ACTIVITY: N ATP + {nucleotide}(M) = N diphosphate + {nucleotide}(M+N).
                                                                                                                                                                                                                                                                                                                                X-RAY CRYSTALLOGRAPHY (2.5 ANGSTROMS).

                                                                                               immunosuppressant and cytostatic activity. The polymucleorides are useful in gene therapy. A composition containing a polymeptide or polymucleotide of the invention may be used to track as of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activithibin activity, chemoteatic/chemokinetic activity, demonstration and thrombolytic activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SERRSDMAHHPTFRKIYCDAVPYLFKKVRAVYTEGGWFEEGMKLEAIDPLNLGNICVATV 240

Corpus AAB60453-AAB60506 represent 54 human cell cycle and proliferation proteins (CCYPR), which are encoded by AAF59590-AAF59643. CCYPR and agonists of CCYPR are used to treat diseases or conditions associated with decreased expression of functional CCYPR, while CCYPR antagonists are used to treat diseases or conditions associated with coveragnession of functional CCYPR, Monoclonal or Dolyclonal antibodies to CCYPR may be used in enzyme-linked immunosobatt assays (ELISA) or radioimmunoasays to detect CCYPR. CCYPR itself may be used to detect compounds e.g., antibodies, oligonuclectides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that modulate the activity of CCYPR. CCYPR nucleotides can be used to generate transgenic animal models of human collectides can be used in gene therapy in target cells with genetic abnormalities with respect to the expression of CCYPR. Treatment or prevention of a disorder associated with CCYPR. Diseases which can be diagnosed, treated and prevented using CCYPR proteins, nucleic acids, agonists or antegonists include immune, developmental and cell signalling disorders, and cell proliferative disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, allergies, diabetes mellitus, disorders of the menstrual cycle and infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cell cycle and proliferation proteins and polynucleotides are used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer
                                                                                                                                                                                                                                                                                                                                                                                          Human cell cycle and proliferation protein CCYPR-36, SEQ ID NO:36
                                                                                                                                                                                                                                                                                                                                                                                                                                       cell cycle and proliferation protein; CCYPR; human; agonist; antagonist; gene therapy; detection; gene therapy; transgenic animal disease model; immune disorder; developmental disorder, cell signalling disorder; cell proliferative disorder; cancer; tumour; anaemia; epilepsy; arteriosclerosis; asthma; allergy; diabetes mellitus; menstrual cycle disorder; bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 495;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Yue H, Au-Young J, Bandman

                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymciections are useful in gene therapy. A composition containing a polypeptide or polymcleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activities and as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  48 FWCNLGTVDVHPIGWCAINSKILVPPRTIHAKFTDWKGYLMKRLVGSRTLPVDFHIKMVE 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes assemblages and computer readable media comprising novel human cDNA sequences and clones derived from human foetal brain, foetal kidney, melanoma, testis and amygdala cDNA libraries. ABA93702 to ABA93766 represent human cDNA sequences from the present invention which encode the proteins given in ABB05662 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profilling assays, for providing large arrays of human genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures.

The invention relates to novel genes (AB189449-AB190853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointeetinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chamelytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epizatic infections diseases such as wiral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

transcription factors, splicing factors, capping factors, transport proteins, translation factors or replication factors that modulate HSC activity, especially differentiation or replication. The invention provides claimed methods: for identifying PHSC-specific nucleic acids; for generating a stem cell/progenitor cell from PHSCs; for identifying the presence of a PHSC in a sample; for identifying the presence of a PHSC in a sample; for identifying the presence of a compound that modulates HSC activity; for using such a compound to treat an immune system acid into a HSC; and for ex vivo expansion of HSCs. Also claimed are vectors, host cells, and an antibody that specifically binds a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 631;

It is an example of claimed HSC-specific proteins (see AAY9176-93) predicted from novel isolated HSC-specific nucleic acids (see AAA29407-131). The HSCs are especially primitive HSCs (PHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins are growth factors,

                                                                                                                                                                                                                                                                                                                                                                                                      detecting an angiogenesis-associated transcript in a cell in the pustent with a method involves contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence at least 80 identical to any of the angiogenesis-associated human polymucleotide sequences given in the specification. These angiogenesis-associated polymucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polymucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polymucleotide sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polymucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. Abu03456-ABU03569 represent angiogenesis-associated immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               70 WGAASGKPLVPPRIIQHXYINWKAFLVKRLIGAKTLPPDFSQKVSESMQYPFKPCMRVEV 129

The present invention describes a substantially pure nematode C. elegans (Caenorhabditis elegans) nucleic acid (I) encoding a LIN-8 polypeptide (see ABB78648), or LIN-6 polypeptide (see ABB78648), or LIN-6 polypeptide (see ABB78650), where the polypeptides comprise at least 130, 110, 130 contiguous amino acids of the 386, 322 and 498 amino acid sequences given in ABB78648 to ABB78650, and modulate cell proliferation. (I) has contiguous acity of a cell, and for identifying the compound that modulates cell proliferation. (I) is useful for modulates cell proliferation. (I) is useful for modulates cell proliferation (I) can be used for identifying the compound that modulates call proliferation. (I) as useful for the presence of the cell proliferation disease, or an increased chance of developing the disease, by measuring lin-8, Lin-56 or Lin-61 proliferation disease, or an increased chance of developing the disease, by measuring lin-8, Lin-56 or Lin-61 proliferation disease.

(I) is also useful for identifying the compound that modulates cell using Ab or measuring amount of lin-8, lin-56, lin-61 mRNA in the sample.

(I) is also useful for identifying the compound that modulates cell proliferative diseases including cancer, as well as in diagnosing and treating cell proliferative diseases. (I) is also useful for identifying the compound that modulates condentifying the compound that modulates cell proliferative diseases such as mammals and may be used to identify therapeutic compounds. The present sequence represents a human has (heat shock protein) brotein which is given in comparison with the comparison with the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    70 WCAASGKPLVPPRIIQHKYTNWKAFLVKKLIGAKTLPPDFSQKVSESMQYPFKPCMRVEV 129

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL30511), and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QQAPKPAPKPKIQRKRKPKKGAAGGK----TPIDNNIQSVKSRIIALKIIPH------

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTB). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolyysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LEVVDKSQVSRTRMAVVDTVIGGRLRLLYEDGDSDDDF--WCHMWSPLIHPVGWSRRVGH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful coding protein or complementary sequences. The polynucleotides are useful coding protein or complementary for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as an alocaliar weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegnerative diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.

          polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymurlectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating in equality of the polypeptide and polymucleotide sequences have applications in dispostics, forensics, gene mapping, identification of mutations in chaptoric for generation generated and produce other types of data and products dependent on DNA and amino acid sequences of the invention.

Oute: The sequence dispondences of the invention.

Oute: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                 IHAKFTDWKGYLMKRLVGSRTLPVDFHIKMVESMKYPFRQGMRLEVVDKSQVSRTRMAVV 135

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopothic, cytostatic, anti-HIV, haemostatic, nephrotropic, contemporatic, anti-HIV, haemostatic, nephrotropic, or continuation and heparcorropic activity. The polymucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are principlerative disorders (e.g. cancers including adenocarcinoma, proliferative disorders (e.g. cancers including adenocarcinoma, lumphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's syndromes, inflammathon, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABU11450-ABU11845 represent the MDDT polymucleotides encoded by ABU11450-ABU11845 represent the MDDT polymucleotides encoded by ABU11450-ABU11845 represent did not form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic form part of the printed to the vipo int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    299 NWENYLEKTKSKAAPSRLFNWDCPNHGFKVGMKLEAVDLMEPRLICVATVKRVVHRLLSI 358

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for disgnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's sisaese, acquired immunodeficiency syndrome (AIDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABU11450-ABU11845 represent the MDDI polynucleotides encoded by ABU11450-ABU11845, described in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed especification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.
